

North School of Pharmacy and Medicines Optimisation mentor study day

10 October 2018

09:00 to 17:00

[Book this event](#) [1]

Event Location:

Don Valley House, Savile Street East, Sheffield, S4 7UQ

Our mentor skills training is designed to support a range of work-based learning programmes by providing quality and consistency in mentoring. Workbooks will support learning pre-course, during the study day and post course. A variety of supporting documents will help to deliver high quality mentoring skills and support mentees. This training is mapped to national occupational standards and can be used and adapted by any organisation.

We provide tools and resources for trainee mentors including a study day. We also provide best practice templates for recording mentor meetings, an overview of mentoring standards and various resources to support learners and assist mentors in their role.

This training is open to all staff who meet the entry criteria. It is intended to support those groups of staff who currently have no formal mentoring training available to them.

Please note that this training does not meet professional body accreditation.

Application is by nomination from your manager. All trainee mentors should be approved, nominated and supported by their managers and employing organisations to benefit from the full mentor skills training.

Related Content

Medicines optimisation

Medicines optimisation is about helping people to get the best outcomes from their medicines. It describes systems and processes used by staff, working in health and social care, which ensure that people receive the best possible care with medicines.
